About this Table

Content and description
Data on self-reported information regarding New Brunswickers access to primary care services. Topics include having a permanent or temporary primary care provider and services received in preferred official language as well as the overall experience with health care services.

Why it is important
The results from the Primary Care Survey allows the NBHC to inform citizens and health system stakeholders about the quality of primary health care services from citizens' perspectives. This information can be used to make future improvements to primary health care in the province.

Availability of the data
The information for this data table is available at different geographical levels as well as by demographic groups. More information is available on our Primary Care Survey.

Note about demographic groups
In 2023, the NBHC undertook a review of the demographic questions in its surveys to more accurately report on the experience of citizens who identify with particular groups. As such, starting in 2024, all demographic groups (characteristics) have been adjusted to reflect this change. Data tables and indicator pages were adjusted to allow for trending where applicable.
