### About

This indicator is the percentage of students in grades K to 5 who ate meals while watching TV, 3 or more times during the week before the survey. Survey responses are provided by the parent.

### Source

Student Wellness and Education Survey, Grades 4-5

### Calculations

This indicator is calculated by dividing the number of respondents who answered "3 times, 4 times, 5 times, 6 times, or 7 times or more" by the number of respondents who answered "none, 1 time, 2 times, 3 times, 4 times, 5 times, 6 times, or 7 times or more" to the question: Last week, how many times did your child eat meals while watching TV?

### Notes

The 2019-2020 edition of this survey was conducted during the COVID-19 pandemic. Since the number of schools that participated is much lower than other editions of the survey, results at the provincial level were deemed not representative of the total student population. Therefore, survey results for New Brunswick, health zones and demographic groups are not available for the 2019-2020 edition. However, results are available for communities in which the number of participating schools was deemed sufficient to be representative of the student population in that community.
