## About

This indicator is the percentage of citizens [having used a hospital emergency department in the last 12 months] who waited less than 4 hours at the hospital emergency department.

## Source

Primary Health Survey and Primary Care Survey

## Calculations

This indicator is based on respondents who have used a hospital emergency department in the last 12 months. This indicator is calculated by dividing the number of respondents who answered "less than 1 hour, 1 to less than 2 hours or 2 to less than 4 hours" by the number of respondents who answered "less than 1 hour, 1 to less than 2 hours, 2 to less than 4 hours, 4 to less than 8 hours, 8 hours or longer or I left without being seen" to the question: The last time you went to the hospital emergency department, how long did you wait from the time you came in to the time you were treated by the doctor or nurse practitioner?

## Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.

Unit	Interpretation	NBHC code
%	Higher is better	PH_ACCEA_1
