	Year 2020
\$60,000 or more	30.8
Persons with a disability	
Without disability	29.0
With disability	37.8

About

This indicator is the percentage of citizens [among those who do not have a family doctor or a nurse practitioner] who said there are no family doctors or nurse practitioners available in the area to take new patients.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is based on respondents who do not have a family doctor or a nurse practitioner. This indicator is calculated by dividing the number of respondents who answered "yes" by the number of respondents who answered "yes or no" to the question: Why do you not have a personal family doctor or a nurse practitioner: 1) No family doctors or Nurse Practitioner available in the area to take new patients

Notes

Due to changes in content and methodology, this indicator has been discontinued. The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
