	Year 2020
\$60,000 or more	10.5
<b>Persons with a disability</b>	
Without disability	11.7
With disability	S

## About

This indicator is the percentage of citizens [among those who do not have a family doctor or a nurse practitioner] who said they are in good health and do not need a family doctor or nurse practitioner.

## Source

Primary Health Survey and Primary Care Survey

## Calculations

This indicator is based on respondents who do not have a family doctor or a nurse practitioner. This indicator is calculated by dividing the number of respondents who answered "yes" by the number of respondents who answered "yes or no" to the question: Why do you not have a personal family doctor or a nurse practitioner: 4) In good health, do not need a doctor or Nurse Practitioner

## Notes

Due to changes in content and methodology, this indicator has been discontinued. The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
