About

This indicator is the percentage of citizens [visiting a community health centre in the last 12 months] who reported that the community health centre has an after-hours arrangement for them to see another health care provider when the office is closed.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is based on respondents who have visited a community health centre in the last 12 months . This indicator is calculated by dividing the number of respondents who answered "yes" by the number of respondents who answered "yes, no or I don't know" to the question: Does the community health centre have an after-hour arrangement for you to see or talk to another health care provider when the centre is closed?

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
