	Year 2020
\$60,000 or more	19.8

Persons with a disability

Without disability	16.3
With disability	37.9

About

This indicator is the percentage of citizens who reported that they have required a diagnostic test (MRIs, CAT Scans or angiographies) provided in a non-emergency situation in the last 12 months.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is calculated by dividing the number of respondents who answered "1 or more" by the number of respondents who answered "0 to 100" to the question: In the past 12 months, how many times have you required one of these tests: MRIs, CAT Scans and angiographies provided in a non-emergency situation?

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
