### About

This indicator is the percentage of citizens [with a family doctor] who reported that their family doctor always gives them enough time to discuss their feelings, fears and concerns about their health.

#### Source

Primary Health Survey and Primary Care Survey

#### Calculations

This indicator is based on respondents who have a family doctor . This indicator is calculated by dividing the number of respondents who answered "always" by the number of respondents who answered "never, rarely, sometimes, usually or always" to the question: When you need care or treatment, how often has your family doctor or nurse practitioner given you enough time to discuss your feelings, fears and concerns about your health?

#### Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
