## About

This indicator is the percentage of citizens who reported experiencing difficulties in getting the health care they needed in the last 12 months because they were unable to leave the house due to a health problem.

## Source

Primary Health Survey and Primary Care Survey

## Calculations

This indicator is calculated by dividing the number of respondents who answered "yes" by the number of respondents who answered "yes or no" to the question: Now think of any difficulties you may have experienced in getting the health care services you needed in the last 12 months. In the last 12 months, did you: c) Find that you were unable to leave the house because of a health problem

## Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
