## About

This indicator is the percentage of citizens who reported that they have been diagnosed or treated for one (1) or more chronic health conditions (among a list of 12 conditions).

## Source

Primary Health Survey and Primary Care Survey

## Calculations

This indicator is calculated by dividing the number of respondents who answered "yes to at least 1 of the 12 chronic health conditions asked in the questionnaire (excluding: high cholesterol and anxiety)" by the number of respondents who answered "yes or no, to at least 1 of the options asked" to the question: Has any health professional ever diagnosed you with or treated you for any of the following chronic health conditions: arthritis, asthma, chronic pain, Emphysema or COPD (chronic obstructive pulmonary disease), cancer, diabetes, depression, A mood disorder other than depression, such as bipolar disorder, mania, manic depression, or dysthymia, heart disease, stroke, high blood pressure or hypertension or gastric reflux (GERD).

## Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
