Persons with a disability				
Without disability	92.9	91.8	91.7	n/a
With disability	88.4	89.3	88.9	n/a

About

This indicator is the percentage of citizens who reported that verbal information about a medical condition or a prescription is always or usually easy to understand.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is calculated by dividing the number of respondents who answered "usually or always" by the number of respondents who answered "never, rarely, sometimes, usually or always" to the question: when learning about a medical condition or a prescription, how often was it verbally explained to you in a way that you could understand?

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.

Unit	Interpretation	NBHC code
%	Higher is better	PH_COMOA_1
