With disability	44.8

About

This indicator is the percentage of citizens [who have reported using cannabis in the last 12 months] who reported having used cannabis for medical purposes only, either with or without a medical document.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is based on respondents who have reported using cannabis in the last 12 months . This indicator is calculated by dividing the number of respondents who answered "medical purposes only, either with or without a medical document" by the number of respondents who answered "non-medical purposes only, medical purposes only, either with or without a medical document or both medical and non-medical purposes" to the question: Have you used cannabis for...?

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
