\$60,000 or more	73.8	72.1
<b>Persons with a disability</b>		
Without disability	71.2	70.9
With disability	68.1	66.6

## About

This indicator is the percentage of citizens [taking prescription medications on a regular basis] who reported that a pharmacist helps them the most when they need help in understanding how to take their medications.

## Source

Primary Health Survey and Primary Care Survey

## Calculations

This indicator is based on respondents who have reported taking prescription medications on a regular basis . This indicator is calculated by dividing the number of respondents who answered "pharmacist" by the number of respondents who answered "I do not need help in understanding how to take my medications, your family or friends, your personal family doctor or nurse practitioner, pharmacist, nurse at your doctor's office, nurse from the Extra-Mural Program or I get the information I need from the internet" to the question: If you need help in understanding how to take your medications, who helps you the most?

## Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
