About

This indicator is the percentage of citizens who reported that they felt that they needed to see or talk to a health professional in the last 12 months about their mental or emotional health, or their use of alcohol or drugs.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is calculated by dividing the number of respondents who answered "yes" by the number of respondents who answered "yes or no" to the question: In the last 12 months, was there ever a time when you felt that you needed to see or talk to a doctor, nurse, or other health professional about your mental or emotional health or your use of alcohol or drugs?

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small subpopulations or when comparing it to other PHS editions.
