About

This indicator is the percentage of citizens who take part in moderate or vigorous physical activity at least two and a half hours per week.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is calculated by dividing the number of respondents who answered "at least 2½ hours per week" by the number of respondents who answered "at least 2½ hours per week, at least 1 hour but less than 2½ hours per week, at least ½ an hour but less than 1 hour per week, for less than ½ an hour per week or I don't take part in any moderate or vigorous physical activity" to the question: Moderate and vigorous physical activities are activities that increase your heart rate and make you get out of breath and sweat. Thinking about the past month, what best describes your typical physical activity level?

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small subpopulations or when comparing it to other PHS editions.

Unit	Interpretation	NBHC code
%	Higher is better	PH_PHY01_1
