\$60,000 or more	13.3

Year
2020

Persons with a disability

Without disability	16.1
With disability	35.7

About

This indicator is the percentage of citizens who are lonely. Citizens are given a 'total loneliness score' based on their responses to 3 individual question about loneliness, and a cut-off is used to identify citizens with a high score.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is calculated by dividing the number of respondents who have a total loneliness score higher than a specified cutoff by the number of respondents who answered the following 3 questions: 'How often do you feel that you lack companionship?', 'How often do you feel left out?' And 'How often do you feel isolated from others?'. The response options for these 3 questions are: hardly ever, some of the time and often.

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.

Unit	Interpretation	NBHC code
%	Lower is better	PH_SIL04_1
