About

This indicator is the percentage of citizens receiving home care services from a home support worker [and receiving services from more than one person] who reported that the home support workers seemed informed and up-to-date about all the care they received in the last 2 months.

Source

New Brunswick Health Council, Home Care Survey

Calculations

This indicator is based on respondents who receive services from more than one person . This indicator is calculated by dividing the number of respondents who answered "always" by the number of respondents who answered "never, sometimes, usually or always" to the question: In the last 2 months, how often did home support workers seem informed and up-to-date about all the care you received at home?

Notes

The 2021 edition of the Home Care Survey was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, users are advised to use the survey data with caution, especially when creating estimates for small sub-populations or when comparing it to other editions of the survey.
