Without disability	<b>31.5</b>
With disability	<b>23.2</b>

## About

This indicator is the percentage of citizens who used French during their last consultation with their primary care provider.

## Source

Primary Health Survey and Primary Care Survey

## Calculations

This indicator is based on respondents who have a family doctor or a nurse practitioner and who consulted with them in the last 12 months. This indicator is calculated by dividing the number of respondents who answered "French" by the number of respondents who answered "English, French or other, please specify:" to the question: Thinking of the last time you consulted with your family doctor or your nurse practitioner, either in-person or virtually, which language was used during this consultation?

## Notes

Due to changes in content and methodology, this indicator has been discontinued.
