	Year 2022
\$60,000 or more	14.8
Persons with a disability	
Without disability	15.7
With disability	19.1

About

This indicator is the percentage of citizens who can consult professionals other than doctors or nurse practitioners at the same place as their primary care provider for their health problems.

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is based on respondents who have a family doctor or a nurse practitioner. This indicator is calculated by dividing the number of respondents who answered "yes" by the number of respondents who answered "yes, no or I don't know" to the question: Can you consult professionals other than doctors or nurse practitioners at the same place as your family doctor or your nurse practitioner for your health problems?

Notes

Due to changes in content and methodology, this indicator has been discontinued. The following indicator(s) are related to this one and can be typed into the indicator search box on our website: PC_PCKOP_3. The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small sub-populations or when comparing it to other PHS editions.
