About

This indicator is the percentage of citizens who do not have a primary care provider (family doctor or nurse practitioner).

Source

Primary Health Survey and Primary Care Survey

Calculations

This indicator is based on respondents who said "no" to both questions about attachment to a primary care provider: "Do you have a personal family doctor" and "Do you have a personal nurse practitioner?"

Notes

The 2020 edition of the Primary Health Survey (PHS) was conducted during the COVID-19 pandemic. While the pandemic did not influence the survey's response rate, NBHC had to assess the impact of surveying during the pandemic. Accordingly, advanced statistical analyses were performed to allow for comparison between the results obtained in 2020 and those obtained in previous PHS cycles. Despite these analyses, users are advised to use the PHS 2020 data with caution, especially when creating estimates for small subpopulations or when comparing it to other PHS editions.

Unit	Interpretation	NBHC code
