| Within 5 days with family doctor % 2024 | 34.5 | 35.5 |
| Within 5 days with nurse practitioner % 2024 | 27.9 | S |

About this Table

Content and description

Data on self-reported information regarding the use and experience with services of New Brunswickers who have a permanent primary care provider (either a family doctor or a nurse practitioner). Topics include having a permanent primary care provider, use of primary health care services and experience with the services received. Information is available about timely access to a provider, use of other services because the provider is not available.

Why it is important

The results from the Primary Care Survey allows the NBHC to inform citizens and health system stakeholders about the quality of primary health care services from citizens' perspectives. This information can be used to make future improvements to primary health care in the province.

Availability of the data

The information for this data table is available at different geographical levels as well as by demographic groups. More information is available on our [Primary Care Survey](#)

Note about demographic groups

In 2023, the NBHC undertook a review of the demographic questions in its surveys to more accurately report on the experience of citizens who identify with particular groups. As such, starting in 2024, all demographic groups (characteristics) have been adjusted to reflect this change. Data tables and indicator pages were adjusted to allow for trending where applicable.
