About this Table

Content and description

Data on self-reported information regarding the access and experience of New Brunswickers with virtual care services. Topics include use of virtual care, types of health care services and tools used during last virtual consultation, and experiences with virtual care.

Why it is important

The results from the Primary Care Survey allows the NBHC to inform citizens and health system stakeholders about the quality of primary health care services from citizens' perspectives. This information can be used to make future improvements to primary health care in the province.

Availability of the data

The information for this data table is available at different geographical levels as well as by demographic groups. More information is available on our [Primary Care Survey](#) page.
