**Province** New Brunswick

Chronic health conditions and management	
One (1) or more chronic health conditions %   2024	67.4
Confidence in managing their health conditions, very confident %   2024	34.2

## **About this Table**

#### Content and description

Data on self-reported information regarding the accessibility and experiences in using health care services. Topics include attachment and accessibility to a primary care provider within 5 days, use of other health care services because the primary care provider is not available as well as main barriers to accessing health care services and management of chronic health conditions.

#### Why it is important

The results from the Primary Care Survey allows the NBHC to inform citizens and health system stakeholders about the quality of primary health care services from citizens' perspectives. This information can be used to make future improvements to primary health care in the province.

#### Availability of the data

The information for this data table is available at different geographical levels as well as by demographic groups. More information is available on our <u>Primary Care Survey page</u>.

#### Note about demographic groups

In 2023, the NBHC undertook a review of the demographic questions in its surveys to more accurately report on the experience of citizens who identify with particular groups. As such, starting in 2024, all demographic groups (characteristics) have been adjusted to reflect this change. Data tables and indicator pages were adjusted to allow for trending where applicable.
