POPULATION HEALTH

Snapshot

Zone 1
Moncton and South-East Area

Province
New Brunswick

Health Outcomes

	Zone 1	Province
Perceived health, very good or excellent % | 2024	40.7	37.7
Perceived mental health, very good or excellent % | 2024	44.3	43.2
Life satisfaction, very satisfied or satisfied % | 2020	89.7	90.8
Infant death Rate per 1,000 live births | 2021 to 2023	5.1	4.3
Life expectancy Years | 2015 to 2017	81.7	80.7
Breathing diseases, years of life lost Rate per 10,000 population | 2019 to 2023	21	29
Cancer, years of life lost Rate per 10,000 population | 2019 to 2023	143	159
Heart and stroke, years of life lost Rate per 10,000 population | 2019 to 2023	78	88

	Zone 1 Moncton and South-East Area	Province New Brunswick
Injuries, years of life lost Rate per 10,000 population | 2019 to 2023	**60**	**61**
Suicides and self-inflicted injuries, years of life lost Rate per 10,000 population | 2019 to 2023	**22**	**30**
Potentially avoidable mortality Rate per 100,000 population | 2021 to 2023	**215.8**	**235.6**
Mortality from preventable causes Rate per 100,000 population | 2021 to 2023	**145.5**	**158.1**
Mortality from treatable causes Rate per 100,000 population | 2021 to 2023	**70.2**	**77.5**

Health Services

account for 10% of health determinants

Ambulatory care sensitive conditions Rate per 100,000 population younger than age 75 | 2024-2025	**315**	**367**
Seniors that recieved a flu shot in the last 12 months % | 2020	**65.7**	**66.5**
Have a family doctor or nurse practitioner % | 2025	**80.9**	**72.6**
Overall experience during the hospital stay, good or very good % | 2023	**80.4**	**79.9**
Favourable rating of overall health care services received % | 2025	**57.2**	**58.2**
High Users of Inpatient Acute Care Services Rate per 100 patients | 2024-2025	**4.1**	**4.4**
Breast cancer screening % | 2023-2025	**62.3**	**54.5**

New Brunswick Health Council | Conseil de la santé du Nouveau-Brunswick

	Zone 1 Moncton and South-East Area	Province New Brunswick
Health Behaviours		
account for 40% of health determinants		
Daily or occasional smoker % | 2020	15.0	17.5
Citizens who eat 5 or more servings of fruits or vegetables per day % | 2020	41.3	41.9
Heavy drinking % | 2020	26.7	26.9
Moderate or vigorous physical activity % | 2020	49.0	49.9
Perceived life stress, most days quite a bit or extremely stressful % | 2023-2024	24.7	23.0
Sexually transmitted infections - chlamydia Rate per 10,000 population | 2019	39	29
Teens who gave birth Rate per 1,000 females | 2022	5	7
Social and Economic Factors		
account for 40% of health determinants		
Sense of community belonging, somewhat strong or very strong % | 2020	65.7	72.0
Low income households % | 2021	13	14
No high school diploma (25-64 years) % | 2021	10	11
Single parent family % | 2021	15	16

	Zone 1 Moncton and South-East Area	**Province** New Brunswick
Employment rate % | 2021	**57**	**54**

Physical Environment

account for 10% of health determinants

Household with high radon concentration % | 2009-2011	**20**	**25**
Occupied dwellings requiring major repairs % | 2021	**6.6**	**7.8**

About this Table

The Population Health Snapshot is a representation of the health of the population based on the Population Health Model that aims to inform individuals, communities, and organizations about the health status of the population with respect to the region they live in or provide services to.
It consists of 35 indicators for New Brunswick and each of the 7 health zones, that compare where each zone stands in comparison to the others.

What do we measure?

The indicators in our Snapshot fall within one of two categories:

- Health Outcomes; or
- Determinants of health (grouped into: Health Services, Health Behaviours, Social and Economic Factors, and Physical Environment).

The indicators are updated with the most recent information available to us.

How can the snapshots be used?

The population health snapshots help answer "how do we compare to others?"
To facilitate the identification of areas of strengths and areas of improvement, this year, the Snapshots include green and red flags that highlight the indicators where the zone

performs better or worse than other zones, based on a Z-score analysis.

What is a Z-Score?

A Z-score is a numerical measurement that describes a value's relationship to the mean of a group of values (normal distribution of values). A Z-score is measured in terms of standard deviations from the mean. If a Z-score is 0, it indicates that the data point's score is identical to the mean score. A Z-score of 1.0 (or -1.0) would indicate a value that is one standard deviation from the mean. For the Population Health Snapshot, a Z-score of 1.282 is the cut point used to display flags that inform on health zone values that are far enough from the mean to be deemed better or worse than the average.
