High school or less	61.5
Postsecondary	54.4
<b>Type of care</b>	
Medical care	56.3
Surgical care	63.5
Maternity care	48.5

## About

This indicator is the percentage of acute care patients who reported that they always benefited from an internal coordination of care.

## Source

Hospital Acute Care Survey

## Calculations

This indicator is calculated by taking the sum of the weighted proportions obtained for the following two indicators: AU\_CRD01\_1 and AU\_CRD02\_1. This sum of weighted proportions is then divided by the sum of the weighted number of respondents to these same two indicators. The questions to which these indicators refer are as follows: 'Do you feel that there was good communication about your care between doctors, nurses and other hospital staff?' and 'How often did doctors, nurses and other hospital staff seem informed and up-to-date about your hospital care?'. This composite score calculation methodology is the same as the one used by the Canadian Institute for Health Information (CIHI).
