High school or less	57.7
Postsecondary	55.6

## About

This indicator is the percentage of acute care patients who reported that they always received help as soon as they wanted.

## Source

Hospital Acute Care Survey

## Calculations

This indicator is calculated by taking the sum of the weighted proportions obtained for the following two indicators: AU\_ROS01\_1 and AU\_ROS03\_1. This sum of weighted proportions is then divided by the sum of the weighted number of respondents to these same two indicators. The questions to which these indicators refer are as follows: 'During this hospital stay, after you pressed the call button, how often did you get help as soon as you wanted it?' and 'How often did you get help in getting to the bathroom or in using a bedpan as soon as you wanted?'. This composite score calculation methodology is the same as the one used by the Canadian Institute for Health Information (CIHI).
