About this Table

Content and description

Data about the experience patients reported during their hospital stay in a New Brunswick hospital. The indicators measure acute care patients' reported experience regarding the room environment and services, the responsiveness of hospital staff, pain control, safety and their overall care experience.

Why is it important?

By better understanding the experience of citizens with New Brunswick hospitals, we can better assess the quality of services. This also encourages health system stakeholders to create performance targets based on care experience survey indicators.

Availability of the data

The information in this data table is available for New Brunswick in general, by the seven New Brunswick health zones, the two Regional Health Authorities, by hospital (medium and large hospitals), by type of care received, as well

as by demographic groups. More information is available on our [Hospital Acute Care Survey page](#).
