

## HEALTH SERVICE QUALITY

# Mental Health and substance use services

Province  
New Brunswick

## Mental Health and substance use services

Median wait time for "one-at-a time therapy" Days   2024-2025	7.0
Repeat hospital stays for mental health and substance use %   2024-2025	11.6
Emergency department visits for mental health and substance use %   2023-2024	14.2
Self-Harm hospitalizations Rate per 100,000 population   2024-2025	52
Satisfaction with mental health and substance use services received, somewhat or very satisfied %   2024	76.8

## About this Table

### Content and description

This table has indicators that describe the performance of mental health and substance use services in the province. It covers topics such as timely access to services, repeat hospitalizations and emergency departments visits due to mental health and substance use, and patient satisfaction with mental health and substance use services.

### Why is it important?

These indicators help inform citizens and health system stakeholders about the quality of mental health and substance use services in the province. It also encourages health system stakeholders to create performance targets and make necessary improvements.

### Availability of the data

The information in this data table is available for New Brunswick in general and by the seven New Brunswick health zones.

### What is a Z-Score?

To facilitate the identification of areas of strengths and areas of improvement, the data table includes green and red flags that highlight the indicators where the zone performs better or worse than other zones, based on a Z-score analysis.

A Z-score is a numerical measurement that describes a value's relationship to the mean of a group of values (normal distribution of values). A Z-score is measured in terms of standard deviations from the mean. If a Z-score is 0, it indicates that the data point's score is identical to the mean score. A Z-score of 1.0 (or -1.0) would indicate a value that is one standard deviation from the mean. A Z-score of +1.282 is the cut point used to display flags that inform on health zone values that are far enough from the mean to be deemed better or worse than the average
