Care received from an informal caregiver in the last 2 months

Received help from an informal caregiver % | 2024 **68.8**

Received help at least once a week % | 2024 **86.0**

About this Table

Content and description

Data about key indicators that reflect the experience citizens reported while receiving services from the Extra-Mural Program. Topics include overall satisfaction, sharing of information, communication, coordination, availability of services, services helped in staying home and care received from informal caregivers.

Why is it important?

By better understanding the experience of citizens with Extra-Mural Program services, we can better assess the quality of services. This also encourages those responsible for the program to create performance targets based on care experience survey indicators.

Availability of the data

The information for this data table is available at different geographical levels as well as by demographic groups. More information is available on our [Home Care Survey page](#).

Note about demographic groups

In 2023, the NBHC undertook a review of the demographic questions in its surveys to more accurately report on the experience of citizens who identify with particular groups. As such, starting in 2024, all demographic groups (characteristics) have been adjusted to reflect this change. Data tables and indicator pages were adjusted to allow for trending where applicable.
