# AT A GLANCE

# Miramichi, Rogersville, Blackville Area

Population: 36,032 Land Area (km<sup>2</sup>): 9,036

The goal of **My Community at a Glance** is to empower individuals and groups with information about our communities and stimulate interest in building healthier communities. It can help us towards becoming increasingly engaged healthier New Brunswickers.

The information provided in this profile gives a comprehensive view about the people who live, learn, work, take part in activities and in community life in this area. The information included in this profile comes from a variety of provincial and federal sources, from either surveys or administrative databases.

Having the ability to access local information relating to children, youth, adults and seniors for a community is important to support planning and targeted strategies but more importantly it can build on the diversity and uniqueness of each community.

### The main industries include:

- Health care and social assistance
- Public administration
- Retail trade
- Construction
- Accommodation and food services

### This community is 1 of 33 in New Brunswick.

lt is part of: Zone 7: Miramichi Area

The median household income is \$50,687

My Community

# About the New Brunswick Health Council:

New Brunswickers have a right to be aware of the decisions being made, to be part of the decision making process, and to be aware of the outcomes and cost of the health system.

The New Brunswick Health Council will foster this transparency, engagement, and accountability by engaging citizens in a meaningful dialogue, measuring, monitoring, and evaluating population health and health service quality, informing citizens on health system's performance and recommending improvements to health system partners.

# Be inspired to make a difference!

Individuals in a community have a role to play in supporting or enhancing the rights and well-being of a population.

Communities in New Brunswick need to determine for themselves what will make their community a vibrant one, in a rural or urban setting. Whether it be promoting healthy aging, healthy child development, self-sufficiency, community involvement or personal enrichment, these could be some possible areas of focus.

Many policies, programs and services are being developed at the municipal, regional and provincial levels. Do they align? Do they meet the needs of the community? Are they working? Do they need to be improved?

This tool is an opportunity for shared measurements, common language, and collaboration across numerous groups to encourage and support a common vision towards engaged healthier New Brunswickers.

The community profiles are based on a population health model that emphasizes the many factors that can make community healthier places to live, learn, work, and play.

# About the data:

Each community profile regroups a variety of indicators that are collected and synthesized by the New Brunswick Health Council from a variety of sources.

These data sources are being used to represent the health of the population in each community, each with various levels of reliability and limitations.

We acknowledge that the data may not represent all individual characteristics and circumstances within the communities. The NBHC is continuously working towards improving our existing tools to be more reflective of the diversity of the population.

Together, the administrative, census and volunteer survey information help paint a clearer picture about our individual communities.

All the technical details regarding the methodology behind the profiles and the sources of each indicator is available at <u>www.nbhc.ca</u>

# Legend

E - Use data with caution | F - Not reliable for publiication | n/a - Not available

# **Community Facts**

**Community facts** are all about the people living in this community. It includes demographic information, such as marital status and language preferences, as well as general spending habits of the people in this community.

Knowing who is part of the community is the first part to understanding the community dynamics.

# Approved child care spaces (2016) per 100 children

All efforts have been made to provide quality detailed information for each community. For a variety of reasons, some data is currently only available at the health zone or provincial level.

# Physical Environment

The **physical environment** in which we live, work and relax, is about the quality of both the built environment and the natural environment. The decisions we make regarding our transportation, housing, industry, water use, energy use and waste management all have a direct influence on our quality of life and length of life.

### BUILT ENVIRONMENT:

The **built environment** includes land use, the design of our streets, sidewalks and pathways, the transportation system, and the shape of our communities. Factors such as the distance between home and work, the look and feel of the neighbourhood and streets, the presence or absence of stores, recreation facilities, and parks all affect choices to walk, cycle, take transit, or drive.

It can have a significant impact on our health because it can influence our levels of physical activity, access to jobs and services, and opportunities for social interaction and recreation. The transportation choices we make can also have long-term impacts on our health.

Household (2011)	My Community	NB
Population who owns a dwelling %	81	76
Population who rents a dwelling %	18	24
Population who lives in band housing %	1.4	0.6
Occupied dwellings requiring major repairs %	10	10

Average commuting duration (2011) minutes	15	15

_	Between 5:00 and 6:59 a.m. %	23	22
Time leaving for work (2011)	Between 7:00 and 8:59 a.m. %	56	60
(2011)	After 9:00 a.m. %	20	18

Facilities	My Community	NB
Food outlets/grocery stores (2013) rate per 10,000 population	4	4
Tobacco retailers (2016) rate per 10,000 population (19 years and older)	18	14
Recreational facilities (arenas, artificial turfs, curling clubs, golf courses, pools, provincially approved tracks, ski hills) (2015) rate per 10,000 population	4	3

# Availability of parks/public green spaces close to home (2013) %

NB ranked with all provinces. Rank of 1 means you have access to more.

### NATURAL ENVIRONMENT:

Safe water, clean air, and healthy environment all contribute to good health and are part of our **natural environment**.

The interaction between our health and the environment is constantly being studied. Environmental risks have been proven to significantly influence health. This has been shown either directly by exposing people to harmful agents, or indirectly, by disrupting our forest, oceans and the air we breathe.

Although everyone is at risk of the negative health effects associated with air pollution, certain populations (unborn and very young children, the elderly, those with cardiovascular or respiratory disease, and those who are exposed to other toxic materials that add to or interact with air pollutants) are more susceptible.

### LAND

Radon	My Zone	NB
Raw percentage of homes tested with radon concentrations above 200 Bq/m³ (2009–2011) %	29	25
Household that had heard of radon (2013) %	51	58
Household that had not tested for radon (2013) % of those who heard of radon	93	92

All efforts have been made to provide quality detailed information for each community. For a variety of reasons, some data is currently only available at the health zone or provincial level.

# Households that had applied chemical fertilizer (2013) %

# Health Behaviours

**Health behaviours** consist of eating, physical activity, smoking and drinking habits, and coping with life's stressors which can influence health and well-being.

Healthy behaviours are shaped by individual choices but we can't ignore the external factors (social, economic, health care services and the environment) which may also influence the behaviours. Positive behaviours help promote health and prevent disease. By monitoring health behaviours over time it is possible to develop a proactive approach to population health. This can be done by identifying gaps in the community and developing programs and policies to meet those needs and evaluating the impact over time.

# Social Factors

Support from families, friends and communities has been associated with better health. Social support networks can be very important in helping people solve problems, in dealing with hard times and in supporting individuals in their ability to take control over life circumstances.

In addition, **social factors** such as social connectedness, recognition of diversity, safety, good working relationships, culture - customs and traditions, and the beliefs of the family and community have often been noted as protective factors for the health and well-being of a population.

# Health Services

**Health Services** are designed to prevent and treat diseases which impact population health. Access to care or services at the right place and the right time and based on the respective needs is a key aspect of service quality that can influence the health of individuals.

### ACCESSIBILITY

- **TOP 3** Where do you go to receive health care when you are sick or need care from a doctor, nurse or other health professional (2014) %
  - Your personal family doctor at his/her office
     An after-hours clinic or a walk-in clinic for non-emergency health care needs
     A hospital emergency department

How quickly appointment can be made with personal family doctor (in 5 days or less) (2014) %

### **USE OF SERVICES**

Use of primary health services in the last 12 months (2014)	My Community	NB
Access to a Primary Health Team %	22	28
Visited a personal family doctor %	90	87
Visited the hospital emergency department %	40	41
Has seen a specialist %	57	56
Visited an 'after-hours' clinic or 'walk-in' clinic %	28	24
Visited a community health centre %	6	7
Has seen a nurse practitioner %	8	8
Has seen an alternative practitioner %	24	25
Used Tele-Care or other advice/info line %	7	7
Used ambulance services %	5	6
Has used the emergency room as a regular place of care %	8	12
Has been a hospital or extra-mural patient in the last 12 months %	14	14
Adults (18 to 64 years) %	13	13
Seniors (65 years and over) %	15	17

Mood disorder other than depression %	3	3
Stroke %	6	3
Someone in the household has a memory problem %	9	10

Three or more chronic health conditions (2014) %

# Length of life

Length of life and mortality can be shown in different ways such as life expectancy, median age at death, premature death, potentially avoidable death from preventable causes, potentially avoidable death from treatable causes.

The **infant death rate** is a good indicator of the overall health status of a population. It is a major determinant of life expectancy at birth. It is also sensitive to levels and changes in socio-economic conditions of a population.

Infant death (2012-2014) rate per 1,000 live birth

**Life expectancy** is a projection of the average number of years a person has before death, calculated from the time of birth.

Life expectancy at birth (2007-2009) age	My Zone	NB
Male	76.9 E	77.5
Female	82.6 E	82.8
Both	79.7	80.2

Median age at death is the age at which exactly half the deaths registered in a given time period were deaths of people above that age and half were deaths below that age. Having this information available at the community level permits the comparison with the life expectancy at the zone level. It can help to demonstrate the impact of the determinants of health on premature mortality at the community level.

Median age of death (2010-2014) age

**Premature death:** Death is inevitable, but a large proportion of individuals die before their time because of illness or injury. Premature deaths are deaths that occur before a person reaches an expected age, for instance, age 75. Many of these deaths are considered to be preventable.

Premature deaths (0 to 19 years) (2010–2014)	My Zone	NB
Cancer, years of life lost, rate per 10,000 population	44	12
Injuries, years of life lost, rate per 10,000 population	90	51
Suicides / self-inflicted injuries, years of life lost, rate per 10,000 population	13	15

Premature deaths (before age 75) (2010–2014)	My Zone	NB
Cancer, years of life lost, rate per 10,000 population	208	166
Injuries, years of life lost, rate per 10,000 population	70	65
Suicides / self-inflicted injuries, years of life lost, rate per 10,000 population	36	41
Heart and stroke, years of life lost, rate per 10,000 population	76	88
Breathing diseases, years of life lost, rate per 10,000 population	25	23

**Potentially avoidable death** is premature deaths that could've been prevented or avoided is timely and effective healthcare and disease prevention had occurred.

**Potentially avoidable deaths from preventable causes** are premature deaths that for most part are avoidable through preventing disease or harm from occurring.

**Potentially avoidable deaths from treatable causes** are premature deaths that could potentially have been avoided through finding and treating the diseases earlier and better.
