New Brunswick Student Wellness Survey

Grades 6–12 2018–2019

Feedback Report Results for Anglophone and Francophone Sectors

The *New Brunswick Student Wellness Survey:* Feedback report provides highlights of major findings related to key provincial indicators that are considered crucial for monitoring student wellness behaviours and for developing a culture of well-being in our province.

Pavillion J.-Raymond-Frenette 50 Francophonie Street, Suite 2200 Moncton, New Brunswick Canada E1A 7R1 Tel: 1-877-225-2521 Fax: 506-869-6282

The *New Brunswick Student Wellness Survey* is a provincial initiative of the Department of Social Development – Wellness Branch, in co-operation with the Department of Education and Early Childhood Development. Data collection and analysis is conducted by the New Brunswick Health Council. The purpose of the survey is to examine the health and wellness attitudes and behaviours of students. The data was collected from 39,000 students of 187 (98%) public schools in New Brunswick. Data was also collected from two First Nations Schools to prepare a report specific to the First Nations schools' context.

INTRODUCTION

Regarding the New Brunswick Student Wellness Survey

The *New Brunswick Student Wellness Survey* was initiated in 2006–2007 to support the implementation of the Wellness Strategy (Province of New Brunswick, 2014). The survey initiative aims to collect information directly from the perspective of children and youth and their parents, and to mobilize action on well-being. The surveys have followed a 3-year cycle, as illustrated in the table below.

SURVEY	GRADES	SURVEY COMPLETED BY	SURVEY PERIOD
New Brunswick Student Wellness Survey	Grades 6 to 12	Students	2006–2007 2009–2010 2012–2013 2015–2016 2018–2019
New Brunswick Elementary Student Wellness Survey	Kindergarten to Grade 5	 Student version: Students in Grades 4 and 5 Family version: Parents of students in Kindergarten to Grade 5 	2007–2008 2010–2011 2013–2014 2016–2017 2019–2020

These surveys provide the foundation for *New Brunswick's Wellness Strategy 2014–2021: The Heart of our Future* (Province of New Brunswick, 2014), which aims to enhance quality of life for all. Two key outcomes were identified in New Brunswick's Wellness Strategy:

- Healthy and resilient people
- Healthy and resilient environments

The *New Brunswick Student Wellness Survey* addresses six key themes related to those outcomes: learning, social and emotional development, participation and engagement, healthy lifestyles, safety, and health status. The information contained in this report is provided to assist with the prioritization, development and implementation of initiatives that promote wellness attitudes and behaviours among students.

This Year's New Brunswick Student Wellness Survey

In 2018–2019, 39,000 students from 187 (98%) public schools participated in the survey. This compares to over 38,000 students from 181 (94%) public schools in the last edition of the survey. Two First Nations schools have also participated in the current cycle. Data collected from First Nations schools is only included in those schools' reports.

Why Student Wellness Is Important to Academic Development

The relationship between wellness and education is a mutually supportive one. Wellness is more than the absence of illness and refers to a healthy physical and emotional state, especially as an actively pursued goal (Oxford Dictionaries). Pursuing wellness includes but is not limited to engaging in behaviours such as being physically active, healthy eating, getting proper sleep, and nurturing social and emotional needs. Extensive research has linked these aspects of wellness to educational outcomes such as academic readiness, engagement and success. Ultimately, healthy students are better learners.

A Comprehensive Approach to School Health

The Joint Consortium for School Health (JCSH) promotes the Comprehensive School Health Framework to address both the academic development and wellness of students. The framework emphasizes the need for planning and implementing whole school approaches that incorporate key wellness perspectives and practices across four domains:

- Social and physical environment
- Teaching and learning
- Healthy school policy
- Partnerships and services

To learn more about the Comprehensive School Health Framework and the Joint Consortium for School Health, please visit <u>www.jcsh-cces.ca</u>.

The New Brunswick Student Wellness Survey reports are a valuable source of information for planning initiatives using a Comprehensive School Health Framework. The survey outcomes detailed in those reports may assist in identifying areas of strength on which to build, as well as priority wellness areas that require further attention or promotion. Students, parents, communities and school staff can all be involved in improving student wellness.

Students can use the results to:

- Relate the results to curriculum concepts being taught in the classroom
- Engage in dialogue about the results to seek solutions and create student-driven action plans
- Participate in planning activities for programs related to the School Wellness Grant
- Organize a school-based action team or student wellness club
- Help organize new initiatives (e.g., start an intramural program, hold a health fair, create a video, develop a presentation, or explore health behaviours of another country)
- Share and use the data in class, at home and in the community

Parents and communities can use the results to:

- Plan activities with students, staff, community members and the Parent School Support Committee (PSSC) or Home and School Association (HSA)
- Model healthy behaviours and support the adoption of healthy behaviours
- Share their skills, talents and expertise to support the school and the community
- Work with community groups to help address identified issues

Educators can use the results to:

- Communicate outcomes with students and staff and the Parent School Support Committee (PSSC) Home and School Association (HSA) or community partners
- Incorporate wellness objectives into Improvement Plans
- Develop class assignments and activities
- Engage students in planning and delivering wellness activities
- Create opportunities for staff to model healthy behaviours
- Support requests for funding (e.g., School Wellness Grant)
- Support the development, monitoring and implementation of healthy policies
- Enhance delivery of services or programs for students (e.g., counselling, breakfast program)
- Form new partnerships with parents and the wider community to take collective action
- Implement and evaluate actions to promote wellness

THE NEW BRUNSWICK STUDENT WELLNESS SURVEY DATA IN ACTION

The results of the New Brunswick Student Wellness Survey are shared through various means:

- 1. **School Feedback Reports:** Reports provided to participating public schools comparing their results to the New Brunswick public schools' average.
- 2. **First Nations Schools Feedback Reports:** Reports provided to participating First Nations schools comparing their results to the New Brunswick average among First Nations schools.
- 3. **Educational Districts Feedback Reports:** Reports provided to participating school districts comparing their results to the New Brunswick public schools' average.
- 4. **Educational Districts Data:** Detailed data files provided to participating school districts with information for each school within their jurisdiction.
- 5. Group Reports: Disaggregation of the indicators by groups:
 - i. Anglophone and Francophone sectors
 - ii. Sex
 - iii. Aboriginal/Indigenous (attending public school)
 - iv. Immigrants (foreign-born)
 - v. LGBTQ+
 - vi. Students with learning exceptionality or special education needs
 - vii. Students of lower socio-economic status
- 6. **"At a Glance" Provincial Summary Report**: A one-pager provincial overview of key indicators from the *New Brunswick Student Wellness Survey* with comparison to results from the last survey cycle.

Provincial Strategies and Action Plans, such as the 10–year Education plans (Province of New Brunswick, 2016) also use the data to set targets and to monitor progress on initiatives.

At a more local level, key indicators from the *New Brunswick Student Wellness Survey* are embedded within the *My Community at a Glance* (New Brunswick Health Council, 2017) profiles, which provide important information for local governments, Non-Government Organizations, and Regional Health Authorities, as they plan for services and projects to support community needs.

Important considerations

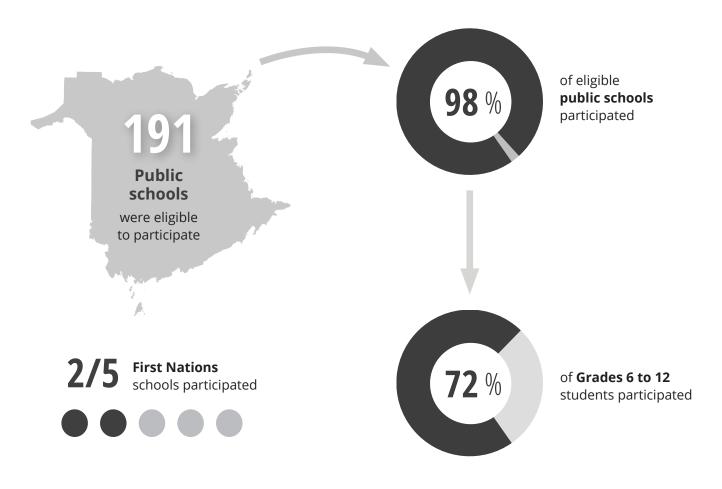

- The questionnaire used in the 2018–2019 *New Brunswick Student Wellness Survey* cycle underwent changes compared to that of the previous cycle. Some questions were removed or amended, other questions were added. As such, caution always needs to be exercised when attempting to compare the results of the survey with results from prior survey cycles because of some differing methodologies or definitions.
- In order to give schools enough time and flexibility to administer the survey, the time frame was over a 7-month period, from November 2018 to May 2019. As a result, the responses to some questions (e.g. modes of commuting to and from school) might have been influenced by seasonality.

SURVEY PARTICIPATION

Who takes part in the New Brunswick Student Wellness Survey?

PARTICIPATION RATES

In 2018–2019, a total of 98% of eligible public schools and 2 First Nations schools have participated in the *New Brunswick Student Wellness Survey*. Such high level of school participation provides high credibility to the district and provincial results. To ensure quality information, it is equally important for an adequate number of students from the participating schools to complete and return their survey. In 2018–2019, 72% of students from participating public schools across New Brunswick returned their completed survey.*

METHODOLOGICAL NOTE

All efforts are made to encourage the participation of students. However, in some cases, the number of respondents within a given school may be lower than anticipated. Caution should be exercised when interpreting results, especially in those cases where there are a relatively small number of students responding to the survey. In cases where the number of respondents is deemed too low, data was suppressed as a precaution. In such cases, schools may opt to use their district level value as the next closest reference point.

* This year, our survey was conducted concurrently with the Canadian Student Tobacco, Alcohol and Drugs Survey, for which 1 in 9 students from grades 7 to 12 from most schools were sampled to take part in. Those students are not included in our participation rates.

TABLES

The New Brunswick Student Wellness Survey is a provincial initiative of the Department of Social Development – Wellness Branch, in co-operation with the Department of Education and Early Childhood Development. Data collection and analysis is conducted by the New Brunswick Health Council. The purpose of the survey is to examine the health and wellness attitudes and behaviours of students. The data was collected from students of 187 (98%) public schools in New Brunswick. Data was also collected from two First Nations Schools to prepare a First Nations schools' specific report.

The following tables present relevant indicators that can help identify areas of strength to build on, as well as areas of improvement that can be targeted to help empower students to adopt healthy lifestyles. The tables cover the following themes:

- Context
- Learning
- Social and emotional development
- Participation and engagement
- Healthy lifestyles
- Safety
- Health status

Legend

Wherever possible, icons are used to identify whether the indicators touch on risk or protective factors.

Understanding Risk and Protective Factors

Wellness outcomes are determined by the contribution of both risk factors and protective factors. While risk factors contribute to the development or worsening of undesirable conditions, protective factors act as a shield against them. For example, while a high amount of sedentary activity is a risk factor for obesity, healthy eating is a protective factor against it. To maintain the health and well-being of students, it is essential to manage risk factors, as well as foster protective factors. In fact, focusing on protective factors can help manage risk factors and reduce the development of health conditions.
